EDUCATION

Bachelor of Engineering - Computer Science and Engineering (AI & ML)

2021 – 2025

M S Ramaiah Institute of Technology, Bangalore

Current CGPA: 8.81/10

Coursework: Data Structures and Algorithms, Design and Analysis of Algorithms, Database Management Concepts and Systems, Operating Systems, Deep Learning, Machine Learning, Object Oriented Programming using Java

TECHNICAL SKILLS

Languages: Python, Java, Kotlin, TypeScript

Development Tools: Git, GitHub, PyCharm, Google Colab, Postman, Docker, Vercel

Frameworks and Libraries: Node.js, React.js, Next.js, Ktor, Fast API, PyTorch

Data Management: Relational Databases (PG SQL), Non-Relational (Firebase, Redis)

Cloud Platforms: AWS (Lambda and EC2), Azure, Razorpay, Mixpanel, Appsflyer

EXPERIENCE

Klydo | Product Engineer

Jan 2026 – Present

- Built **Sherlock AI Agent** (fraud detection) for TNPL, achieving **96% precision** in fraud flagging; enabled safer rollout by reducing high-risk orders and preventing revenue leakage.
- Designed and deployed **agentic data layer** (Lexi + DB Explorer MCP), enabling founders to query production **PostgreSQL** data via WhatsApp/Slack; eliminated dependency on dashboards for real-time decisions.
- Engineered **referral & wallet system** with atomic, concurrency-safe ledger design; scaled referral volume **4.7x** (80 to 378/week) and processed **400+ paid orders** with audit-safe transactions.
- Shipped **coupon hub & TNPL pricing logic**, improving checkout-to-purchase conversion by **+5pp** (82% → 87%).
- Architected **growth infra**: automated ingestion pipelines (Google Merchant Center, Meta) and unified **S2S tracking** across GA4, Mixpanel, Appsflyer, and Clevertap.
- Launched **Spotlight discovery feature** (24% conversion, 400+ WAU) and improved mweb conversion from **7.4% → 8.0%** via catalog and UX optimizations.

Graphene AI | Machine Learning Engineer

Sep 2025 – Dec 2025

- Architecting and restructuring **microservices** to support high-availability operational and analytical workflows.
- Building in-house **AI systems** that automate core business processes and enable gen-ai across teams.
- Designing **Agentic AI Pipeline** for LLM evaluation, and deployment within a distributed service architecture.
- Built **deploy console** to manage deployments of services and maintain **LiteLLM** (reverse proxy) service.

Udaan (incl. Udaan Capital) | SWE Intern

Jan 2025 – Aug 2025

- Contributed to full-stack features across internal teams using **Kotlin** (backend) and **TypeScript** (frontend).
- Automated **competitor-data ingestion** and data workflows, cutting setup errors by 70% and doubling on-boarding throughput.
- Built robust **market-pricing pipelines** with dynamic request signing and incremental sync to handle volatile external sources.
- Enhanced **Udaan Capital's** risk-evaluation engine, improving onboarding accuracy and reducing feature-drift across model retrains.

CADRE ODR | ML Intern

Jan 2024 – Mar 2024

- Developed a real-time **grievance redressal** (RAG) application using ChromaDB and **Mistral 7B & Llama 2** LLMs for user interaction and information extraction.
- Fine-tuned a **BART model** on a custom grievance dataset for zero-shot **hierarchical classification** of government departments. Integrated the classification model with chatbot flow to guide users through a hierarchical grievance path.

PROJECTS

F&B - QR based Food Ordering & Restaurant Management System | Typescript, AWS, MongoDB

Jan 2024

- Led full-stack development, building **70+ APIs** with Node.js and a responsive front-end with TypeScript and Tailwind.
- Optimized performance with **client-side caching**; managed data with **MongoDB** and media storage via **AWS S3**.
- Deployed to serve **2000+ monthly users** and **100+ active** customers per day, including tax and donation services.

NoteRep | Next.js, Node.js, Tailwind CSS, Firebase, Google SEO, Git, Vercel

May 2022

- It is a comprehensive Study Materials and **Notes sharing platform** for college students.
- Integrated features like **Live Calendar** view, **Community Links**, **User Shared links** and **Real-time Class Timetable**
- Built an **AI Chatbot** that navigates users across NoteRep and **Generates real-time ads** in the conversation.
- Actively maintained with 200+ active users, **3,000+** monthly visitors, and **75,000+** total views to date.

Enigma Escape | Python, Streamlit, Llama-3 70B Model, Git, Firebase

December 2023

- A **Text-Based Game** where players have to manipulate an AI into saying specific phrases at different levels.
- Designed game-play where players make indirect queries/prompts to **LLM**, ensuring responses contain specified phrases.
- Integrated **Firebase** to manage user authentication and capture all activities, enabling precise player score tracking.
