EDUCATION

Bachelor of Engineering - Computer Science and Engineering (AI & ML)

2021 – 2025

M S Ramaiah Institute of Technology, Bangalore

Current CGPA: 8.81/10

TECHNICAL SKILLS

Languages: Python, Kotlin, TypeScript, Java, Dart

AI / ML: LLMs (GPT, Claude, Llama, Mistral), Agentic & Multi-agent Systems, RAG, MCP, LLM tool-calling

Backend & Data: Ktor, FastAPI, Node.js, R2DBC + Exposed, PostgreSQL, Redis, Firebase, ChromaDB

Frontend & Mobile: React.js, Next.js, Flutter / Riverpod, Server-Driven UI

Cloud & Tooling: AWS (Lambda, EC2), Azure, Docker, Razorpay, Mixpanel, Appsflyer, Clevertap, Git

EXPERIENCE

Klydo | *Product Engineer · Kotlin/Ktor, Postgres, Redis, Flutter, LLM agents*

Jan 2026 – Present

- Owned the **Try-Now-Pay-Later credit & fraud engine** end-to-end: a 24-signal collector (incl. hex-geo fraud-ring clustering), weighted scoring, an LLM fraud agent (Sherlock), and a config-driven decision service (auto-approve / reject / human review). Ran thousands of per-order evaluations behind **300K+** credit-eligibility decisions, at **96%** flagging precision.
- Rebuilt cart (Cart V2) across three payment modes - prepaid, pay-on-delivery, TNPL - with wallet in checkout and POD abuse guardrails; lifted checkout conversion **+5pp** (82% to 87%). Launched **Spotlight discovery feature** (24% conversion);
- Resolved production reliability and concurrency issues across cart, inventory, and referrals; drove key parts of an atomic, return-aware **referral & wallet ledger**, scaling referrals **4.7x** from 80 to 378/week.
- Built **Lexi & db-explore-mcp**, an MCP server providing schema-aware, **read-only** natural-language access to a production Postgres replica; validated it against 45 golden queries and added self-correcting SQL error handling.
- Shipped Meta and Google Merchant Center catalog sync for **48K SKUs** using AWS Lambda, unified S2S tracking across GA4, Mixpanel, AppsFlyer, and CleverTap, and mentored two engineering interns.

Graphene AI | *Machine Learning Engineer*

Sep 2025 – Dec 2025

- Built an **agentic AI pipeline** for LLM evaluation and deployment within a distributed microservices architecture, along with an in-house deploy console.
- Maintained a **LiteLLM** reverse-proxy gateway routing LLM traffic across teams, and restructured microservices for high-availability workflows.

Udaan (incl. Udaan Capital) | *SWE Intern*

Jan 2025 – Aug 2025

- Automated **competitor-data ingestion** pipelines, cutting setup errors by **70%** and doubling onboarding throughput, with dynamic request signing and incremental sync over volatile external sources.
- Built full-stack features across internal teams using Kotlin (backend) and TypeScript/React (frontend).
- Enhanced Udaan Capital's **risk-evaluation engine**, improving on-boarding accuracy and reducing feature drift.

CADRE ODR | *ML Intern*

Jan 2024 – Mar 2024

- Built a real-time **grievance-redressal RAG** application using ChromaDB with Mistral 7B and Llama 2 for user interaction and information extraction.
- Fine-tuned a **BART model** on a custom grievance dataset for zero-shot hierarchical classification of government departments, and wired it into the chatbot flow to guide users down the right grievance path.

PROJECTS

ParseFi - AI Bank Statement Analyzer | *React, Supabase/PostgreSQL, LLM tool-calling, text2sql, MCP*

2025

- Consolidates bank statements into a financial-intelligence layer with running balances and reconciliation, plus an **MCP-connected chatbot** that answers spending questions in plain English via LLM tool-calling and text2sql.
- Engineered $O(\log n)$ B-tree date-range queries, hash-based dedup, and sliding-window batch processing for auto-reconciliation at scale.

sudo-trade - Event-Driven Multi-Agent Trading Engine | *Python, asyncio, LLM orchestration, real-time market data*

2026

- Engineered an autonomous trading engine with **6 specialized AI agents** for market research, quantitative screening, adversarial bull-vs-bear debate, portfolio decisioning, and execution; decoupled components through a plugin-based async EventBus and exposed the engine through an MCP control layer.
- Scaled a simulated portfolio from **₹ 10L to ₹ 26L in 6 trading days** through **483 adversarial debates** and **148+ trades**; kept inference below **\$1/day** using parallel execution, model routing, per-agent budgets, and heuristic fallbacks.

NoteRep - College Study Platform | *Next.js, TypeScript, Firebase, Groq LLM*

2022

- The go-to study platform for a college campus – notes sharing, live timetable, CGPA predictor with 95% accuracy.
- Added an **AI Chatbot** that navigates users across NoteRep and **Generates real-time ads** in the conversation.
- Integrated features like **Live Calendar** view, **Community Links**, and **Real-time Class Timetable**
- Grew to **2000+ students**, 3K+ monthly visitors, and **75K+ views**; ranks #1 on Google for its queries.
